HYPERTENSION (HIGH BLOOD PRESSURE)

Goal Blood Pressure is less than 140/90

*NOTE: DIABETICS BLOOD PRESSURE GOAL IS LESS THAN 130/80

American Heart Association recommended blood pressure levels					
Blood Pressure Category	Systolic (mmHg)		Diastolic (mmHg)		
Normal Prehypertension	Less than 120 120-139	and or	Less than 80 80-89		
High					
Stage 1 Stage 2	140-159 160 or higher	or or	90-99 100 or higher		

Ten Ways to Control Your High Blood Pressure

- 1. Know your blood pressure. Have it checked regularly.
- 2. Know what your weight should be. Keep it at or below that level.
- 3. Don't use too much salt in cooking or at meals. Avoid salty foods.
- 4. Eat a diet low in saturated fat according to the American Heart Association Recommendations.
- 5. Control alcohol intake. Don't have more than one drink a day if you're a woman or two a day if you're a man.
- 6. Take your medicine exactly as prescribed. Don't run out of pills even for a single day.
- 7. Keep appointments with the doctor.
- 8. Follow your doctor's advice about physical activity.
- 9. Make certain your parents, brothers, sisters and children have their blood pressure checked regularly.
- 10. Live a normal life every other way.

HYPERTENSION (HIGH BLOOD PRESSURE)

WHAT IS HIGH BLOOD PRESSURE?

Blood pressure is the measurement of the pressure or force of blood pushing against blood vessel walls. The heart pumps blood into the arteries (blood vessels), which carry the blood throughout the body. High blood pressure, also called hypertension, means the pressure in your arteries is above the normal range. In most cases, no one knows what causes high blood pressure.

HOW IS BLOOD PRESSURE RECORDED?

Blood pressure is written as two numbers, such as 118/72. The first number is the systolic pressure. This is the pressure in the arteries when the heart beats and fills them with blood. The second number is the diastolic pressure. This is the pressure in the arteries when the heart rests between beats.

Type of blood pressure reading	Normal blood pressure	Prehypertension	Stage 1 hypertension	Stage 2 hypertension
Systolic	Less than 120 mmHg	120-139 mmHg	140-159 mmHg	160 mmHg and above
Diastolic	Less than 80 mmHg	80-89 mmHg	90-99 mmHg	100 mmHg and above

HOW WILL I KNOW IF I HAVE HIGH BLOOD PRESSURE?

Your health care provider can tell you if you have high blood pressure by checking your blood pressure with a special meter. You usually cannot feel high blood pressure. Many people who have high blood pressure don't know they have it. You should have your blood pressure checked once a year to make sure you don't have high blood pressure. Do not rely on drug store measurements, as they may not be accurate.

WHAT CAN HAPPEN IF HIGH BLOOD PRESSURE IS NOT TREATED?

- Stroke
- Enlarged Heart
- Heart Failure
- Peripheral Vascular Disease
- Heart Attack
- Kidney Disease/Failure

PATIENT EDUCATION HANDOUT

WHO IS MORE LIKELY TO HAVE HIGH BLOOD PRESSURE?

- · People with family members who have high blood pressure, cardiovascular disease, or diabetes
- African Americans
- Women who are pregnant
- · Women who take birth control pills
- People over 35
- People who are overweight
- People who are not active
- · People who drink a lot of alcohol
- · People who eat too many fatty foods or foods with too much salt
- People who smoke

WHAT SHOULD I DO IF I HAVE HIGH BLOOD PRESSURE?

- If you have been diagnosed with high blood pressure, you should aim to lower your blood pressure to less than 140/90, or to less than 130/80 if you have diabetes or kidney disease.
- · Check your own blood pressure at home as recommended.
- Eat healthy foods that are low in salt and fat.
- · Achieve and maintain your ideal body weight.
- Limit alcohol to no more than two drinks each day. One drink is defined as 1 oz of alcohol, 5 oz of wine, or 12 oz of beer.
- Be more physically active.
- Quit smoking.
- Work on controlling anger and managing stress.
- Take high blood pressure medicine if your health care provider prescribes it, and follow the health care provider's directions carefully.
- Have regular blood pressure checks by your health care provider.

WHAT SHOULD I INCLUDE IN MY DIET TO CONTROL HIGH BLOOD PRESSURE?

- Eat foods that are lower in fat, salt, and calories such as skim or 1% milk, fresh vegetables and fruit, and plain rice and pasta. (Ask your doctor or health care provider for a more detailed list of salt-free foods to eat.)
- Use flavorings, spices, and herbs to make foods tasty without using salt.
- Avoid or cut down on butter and margarine, regular salad dressings, fatty meats, whole milk dairy products, fried foods, and salted snacks.
- Ask your health care provider if you should increase potassium in your diet or if you need to take a
 potassium supplement.

HOW CAN I BE MORE ACTIVE?

- Check first with your health care provider before increasing your physical activity. Ask your provider what type and amount of exercise is right for you.
- · Choose aerobic activities such as walking, biking, or swimming.
- Start slowly and increase activity gradually. Aim for a regular routine of activity three to five times a week for 30 to 45 minutes each session.

WHAT SHOULD I KNOW ABOUT BLOOD PRESSURE MEDICINE?

- There are many different medicines to treat high blood pressure, and you might need to take medicine from now on. If you are told by your health care provider to take high blood pressure medicine, be sure to follow the exact directions.
- Also ask what side effects can happen with your medicine, and talk to your health care provider about any
 problems or side effects you might have with your medicine. Lastly, do not stop taking the medicine on your own.

HOW CAN I LEARN MORE ABOUT HIGH BLOOD PRESSURE?

Talk to your health care provider or visit your local library. You can also contact health care agencies such as:
